

Xavier Wilcox

With the writing this comment, I must deeply urge whoever may be overseeing this to take action to make sure this data center does not get built. I am 18 a year-old American male and I can say with complete confidence that almost no one in my entire generation wants this or AI in general. These data centers may not impact our lives within the first year that they are built but they will have extremely detrimental consequences on the environment as well as OUR futures as a species. If you do not stop the construction of project Jupiter, I fear that our generation will truly not have a future, nor will our planet and the millions of people and animals that live here with us, do not throw our planet and futures away over some extra money, we live in an economy built around the working class digging for scraps and this will only get worse. Once again, I must heed you, please do not let project Jupiter continue construction. Save the Younger Generation. -Xavier W
