I am writing because I am concerned about the risks and harms Project Jupiter poses to New Mexicans. I am submitting this comment to urge the New Mexico Environment Department to reject Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid in Doña Ana County. This project will cause great damage to both air quality and natural resources to the people of the area. The inhumane and unbelievable amount of carbon dioxide this massive database will exude will cause the area to become gradually hotter and cause the nearby water sources to dry up. To follow up on my previous statement, I am aware of the unfortunate amount of water that AI databases consume in order to cool down their systems, and this can heavily impact the lives of citizens by lowering their water pressure at home, immensely lowering the water resources available to them. To conclude, I must once again repeat my point; this database will only lead to more problems and won't be of any benefit to New Mexicans or anyone else for that matter so please, think of the planet, not of pleasure.

"The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually."
