

Daniel Cruz

Me and my family are tired of the consistent damage that ai is doing to our planet earth, "project Jupiter" a project we don't need nor we will never need u dare say no water will be needed or be used but are we the people to believe that, no, if we take a moment to look into ai data centers it's mostly runned by our water usage if we were to combine the amount of water ai has used that would be enough to give this whole world a cup of water or more and even if you people don't use our water supply this planet has given us u must be aware the damage that is gonna do imagine all that pollution it will create ur taking space from animals that was meant for them as well climate change will soon ruin this planet if we don't take matters into our own hands and yet all yall care about is a stupid let alone project what good is that gonna do the earth think about the damage it's going to be creating.
