

Gabrielle Martinez

I have lived my whole life in New Mexico and we must as a state oppose the data center being built by Yucca Growth Infrastructure/Project Jupiter. This project will be detrimental to our community and ecosystem. These large corporations have shown time and time again they believe in using their money and influence to decimate communities to take advantage of their resources. The dangers of these fuel cells heating our planet will not only impact us long term, our local communities will feel the effects directly in their health, safety, and financially. Our Rio Grande River currently sits dried up with dying fish as Yucca Growth Infrastructure proposes a data center that will use up to 1mil gallons of water PER DAY. Their previous behavior regarding this project, including, making very minor changes to permitting, mass ad campaigns, and being deliberately vague about the pollution, does not instill hope that this would be a good decision for our state. Yucca Growth Infrastructure must be denied or a public forum must be held for comment with virtual comment options available. Please do not risk our citizens and beautiful state to these corporations.
