

Shannon jackson

WE DO NOT NEED DATA CENTERS, we should be focusing our energy and money on more pressing matter. I think data center can contribute alot to the world but should be pushed back untill we find solutions to the all the problems they cause. I also believe the world is giving clear signs that its not ready for this much destruction, from the climate change, water, and the horrible effects its having on animals. If not, and the data center are continuing to expand, they will also destroy the world and it would all be for nothing.
