

Cali forrester

I'm from Kincardine Ontario Canada. I may not be immediately directly affected by this but, A.I. is contributing to a large percent of water usage that hurts ecosystems that can be very fragile. A.I data centres already using up many water sources in areas where they are, and with this proposed mega scale project of A.I. centres it's gonna use a lot of water and, personally I don't think it's fair to replace the usage of water going towards real living beings and things and give it all to A.I. robots instead to keep them cool. this will also produce more CO2 wich will add to global warming temperatures as well as cost probably millions of dollars that could go towards other more important things
