

Lucy Birkhead

This latest change by the minds behind Project Jupiter is still very much NOT what the people of New Mexico want. Switching to fuel cell technology does not change the outcome for our state and its people. Poor air quality and toxic waste which ruins our dwindling water supply is the future for us if we allow Project Jupiter to gain a foothold in our precious Land of Enchantment. Make the right choice and be the voice of the people. We need a moratorium on data centers in NM!
