

Riley McKinstry

As a permanent resident of the beautiful state of New Mexico, I vehemently oppose the consideration of the construction permit application filed by Yucca Growth Infrastructure, LLC. The purpose of the project does not warrant the immense environmental cost to an already resource-burdened state. On the basis of the projected negative impact to public health of the surrounding communities, as well as the lack of proof that increased emissions and utility usage will not directly affect the residents of New Mexico, I demand the denial of this application for the sake of the future of New Mexico and its people.
