We are the first generation of people to experience the hazards of global warming, climate change, and heavy pollution. We are also the last to stop it. Project jupiter will ultimately put a huge amount of carbon dioxide into our air and cause more pollution. The effects of this project will have no benefit for our planet whatsoever. WE CAN LIVE WITHOUT AI!!! What we cannot live without is clean air, fresh water and natural resources that are being destroyed. We need to stop this before the damage we have done will be irreversible. This is my public comment to destroy project jupiter.
