

Hannah Werner

My name is Hannah, and I am asking you to deny the air quality permit for Project Jupiter. This massive project will have extensive long-lasting and irreversible impacts on our environment. Data centers of any kind have recorded noise pollution as it is, and the impact on air quality is also deteriorating. I am strongly against this permit, as it will do significantly more harm than any good that Project Jupiter claims it can bring to the community. We need an extension on the public comment period, as well, to enable full access for the community to provide their input on this request. Additionally, if the permit does not get denied, we deserve a public hearing, in both English and Spanish, with online call access available. The people deserve to have their voice heard for such a massive commitment of our environmental resources.
