we don't need more ai. Our Planet is already drying up faster then it should be and heatwaves are getting so much worst it is suppose to be monsoon season but not one bit of rain has came. A date center isn't needed we lived without ai our whole life just fine we don't need it this bad to be making the world worsts. Things like this make some people think the world is ending sooner and it maybe be because with more date centers means more water usage which in some towns is already limited. We need water for so many things such as our food supply, all of the things we can consume need water to grow better but if we have limited water that won't happen. New Mexico is already very dry and once the water is used there it will go to states all around which the states around are just as dry. So many animals will go extinct if they don't get water like the desert animals if the date center is built there will likely be less rain so animals in the desert aren't able to reach it. With the amount of chemicals that it will throw out too it will the air dangerous to even breath in. There is so many risk with each and every chemical it is gonna throw. Most causing Brain, Liver, Heart damage, cancer, asthma, premature birth, heart attacks, seizures, comas, lung failure, and even permanent blindness. We don't need or want Ai!!
