

Raziel Senketsu

I do not support this data center. All the claims on this website are lies except the creation of jobs. Although they are TEMPORARY jobs. Once construction is complete it will offer nothing to the local community. It will only serve to increase electricity and or water bills. Even if this is a waterless facility it requires more electricity to achieve the same cooling efficiency as water. This operation is being funded by OpenAI and Oracle which have never to this point held the wellbeing of the public in their interest. They are separating themselves from the project because they know that their names would garner less support. This website should be illegal with how openly they lie.
