

Melissa Harrison

I am deeply opposed to this project, as I am opposed to any construction that allows for pilfering of a dwindling resource such as water from New Mexico's already drought stricken landscape. The power draw, immense heat creation, and the noise created by this project will not only devalue local land but destroy the ability to live near it unaffected. These are only the immediate initial concerns, and does not encompass all issues this project creates, such as creating chemical pollutants and decimating local wildlife and their habitat. This project will not create meaningful jobs and the product of its use costs New Mexicans jobs. Whether this data center is used for AI, data management or mass surveillance, it is a cost too high to allow the projects completion in New Mexico.
