

Isabel n/a

I am a resident of Calgary Alberta and although I may not live in a an area directly affected by project Jupiter I still feel the need to help those living nearer stop it. Project Jupiter is an unnecessary waste of resources and doesn't benefit anyone but the higher ups. The ones who live close and have no clean drinking water or no fresh air aren't happy cause "oh now I can use AI" The most important impact it'll have is on the environment. We're already seeing what other data centres half the size of this one are doing to the local environment so why would we want to double that essentially. Project Jupiter will not only affect those around it but will contribute to the global environment impact caused by other data centres and other factors of pollution. We cannot afford to keep destroying our planet like this so we need to do what we can to stop it, starting with the ban of this project.
