

Larch Kingdon-Edwards

Project Jupiter, if implemented, would be disastrous for our communities. Water use and rights in New Mexico is already a huge issue, and one that a large data center like Project Jupiter would accentuate. The idea that it would provide "economic opportunity" and jobs is patently false. It would only be a huge expansion of corporate power over our communities, and one that allows them to put their AI models over our lives and our communities.

I urge you to not allow this to proceed, and to value people over profit.
