

Tobey Quitoriani

I don't want project Jupiter to continue because of the amount of carbon emissions the data center will release once it's up and running. The amount of people and places that'll be affected is huge in the long run, I don't want my people or my habitats to be ruined by an AI data center that will not be of proper use to the rest of humanity. I do not know the proper scale of emissions project Jupiter will release into our atmosphere but I know that if this data center is built, it will affect the lives of many, and eventually it will affect me, my family, and my friends, and my community. I don't wanna see this data center built.
