

Angelina Ortiz

July 2nd 2026 As were approaching summer the rio grande has been dry for almost 4+ weeks now. There's a lot of people that depend on this water to be running. There is also people that use the rio grande river for numerous things. Like fishing, swimming, kayaking, traditional ways in use of the native americans around the rio grande river, and of course crops and fields use the same water. They plants will be affected. With project Jupiter it will not only hurt are water source but are animals the Enchanted land that we New Mexican's call home. There is no need to build the "biggest Ai center" its honestly bogus. What will are children and grandchildren have in the future? WE DON'T NEED AI! These kids and everyone else has a brain that God gave them. they need to academically push There brains to limit. There so much to learn without AI in New Mexico lives.
