I used to live in the United States for majority of my life before I moved to France and I have family that lives in the United States in New Mexico and California. NMED should not continue moving forward with their project, project jupiter because of the carbon thats polluting our planet and also using the water thats become very limited in several different countries, states, cities, etc. This will only increase the climate change that we are facing, we have gotten terrible heatwaves and colder winters. Over 48,000 of our species will also become extinct if we continue moving forward with making more data centers. We will not be able to live in a world where it can handle this much pollution. I ask you to find another way to be able to proceed with your mission that does not pollute the earth. Please allow the public have an additional 60 days to be able to review and comment on this project so they're able to commute equitably. If the permit is not denied then please we ask for a public hearing that needs to be held in Santa Teresa. We ask for your understanding as to why this is not a good idea, for the environment, for our planet.
