

Chloe Sweeney

I have lived in NM for 30 years. The best part of NM is the natural beauty that surrounds us, the mountains, the rivers, the forests, it's what makes us the Land of Enchantment. Seeing the Rio Grande dried up these last few summers has been heartbreaking and its devastating to think of all the wildlife impacted by it, thousands of animals unable to access water during the summer when it's most needed. It is beyond me why NM is even considering allowing this data center to be built. AI is not something that we need to survive. The benefits of building the datacenter do not outweigh the risks of the damage it will cause to the environment. I am confident that if we allow this datacenter to be built it will cause irreversible damage to the already fragile environment and ecosystem. It saddens me to think, future generations may not be able to see all the natural beauty NM has to offer. We need to do everything we can to protect the environment and preserve our home.
