

Carl Brown

I am writing to express my utter disgust for this project. Creating a data center in the desert is one of the most idiotic things i have ever heard. We do not need data centers at all but the ones we have are enough. I cannot seem to find where in your proposal that you are getting this water. I don't want anyone taking any of the water whether it's drinking water, river water or lake water it does not belong to ai data centers. Drying up the little water that is here is for the benefit of who? I am aware of how ai turns neighboring drinking water sources to undrinkable sludge. Fuck you all.
