

Bella Norero

I oppose Project Jupiter and urge the denial of this application on the grounds of environmental concerns, mainly water and energy usage, in addition to the lies and unethical behavior of this company. Utilizing personal information from surveyed community members to submit public comments that are the opposite of their stated stance on this project is devious and misrepresentative of our community's opinion on this data center and its fuel cell technology. This dangerous and damaging project must be stopped. Our air quality, scarce water, and quality of life demand protection from corporate greed. This permit application must be denied. New Mexico deserves better
