

Christopher Baca

I do not believe this is a sustainable development for the peoples or environment of southern New Mexico. New Mexicans cannot afford to sacrifice any water, air, or other natural resources for ai. Furthermore, project Jupiter needs to rehab the land that they have been preparing for this ai installment. Look at examples of what ai data centers are doing to communities where they are already in operation. The communities are being devastated. New Mexico must take action to protect the health of its residents and more importantly the environment.
