

Meridith Williamson

No data centers in our state PERIOD. We do not want our lives to be taken over by AI, especially when it comes to our environment. Putting a data center here is not about creating opportunity or making our lives better, it's about corporate greed and what would we actually get out of it? Direct harm to us and everything in our environment. I refuse to make my life worse only for the rich - who don't care if I (or any of us) live or die - to get richer.

The environmental impact of a data center in NM will be devastating to all and any harm and death that it leads to, of any being, will be on the hands of those who refuse to listen to the people. Keep data centers off our land! New Mexicans and every living being here deserve better!
