

Lauren Lynne

The data centres that already exist are polluting the air, a cause of deforestation, and are huge disruptions to the environment. We in no way need any more of these unnecessary and damaging data centres. Do NOT damage our planet further and continue to build more of these! The impacts have already gone global, we are already experiencing heatwaves in Europe, summers of 40 degrees celsius in the United Kingdom, France, and the rest of europe is NOT NORMAL. Under no circumstances go through with project jupiter, it is a climate disaster waiting to happen.
