

Jordyn Terrazas

I wholeheartedly oppose the approval of an air quality permit for Project Jupiter. The amount of CO2 emissions a year that it would emit is astronomical, the water it would use is ridiculous, and it should not be allowed anywhere in our state. The very very short-term gain of bringing jobs to the community versus the long-term loss that comes with having a data center in your backyard is not worth it. Let's focus on repairing our environment, not paving the way to destroying it.
