

Dylan Kimball

I do not live near where this is happening but I do know that this is not right in any sense. We already have limited water thanks to the other data centers being put up without our permission and we do not need another one. We are already struggling so much with the other centers depleting our water and ruining our air quality, we never wanted nor needed these before and we do not need them now. I sincerely ask you to stop all developments of this project for the betterment of everyone in the area and for the wildlife this will effect.
