

Julie Morrissey

I am a resident of Taos, NM and am very distraught at the idea of Project Jupiter's data center being built. Even though the center would be built south of us, I know in Taos many of us have already experienced dried-out wells, making many of our lives strained because of a lack of water. My friend who lives in Cerro, NM, for instance, has been dealing with no water for weeks because the community well there ran dry. It will remain this way for the time being, until they drill a new well. It makes me sick to think of these data centers being built and using up our already strained resources that we need to survive. Albuquerque and Santa Fe also already have ozone air pollution levels that are dangerous, and these data centers would cause our air pollution to be even worse. The longterm effects could cause health problems for residents, as well as a lack of crucial resources. Stop these centers from being built! We do not want them!!!
