

Josef Murphy

I have been living in New Mexico for 33 years. Every year I have watched our beautiful state enter worse and worse droughts every summer. I remember when southern towns needed water airlifted in because they had no water. We do not need an AI data center using up our precious resources. New Mexico does not need Project Jupiter. We need our communities and resources protected from these modern day snake-oil salesman who seek to steal everything we have. This project will not bring anything positive to New Mexico. Do not allow Project Jupiter to move forward.
