

Agustín Montoya

As a resident of New Mexico and voting constituent, I REJECT THIS PROJECT. This infrastructure project will both damage valuable ecosystems that are crucial to maintain during climate collapse and beyond. To allow this project to move forward would be a crucial failure and damnation of all governing bodies. Harming our air quality, water access, and damaging an ecosystem for the sake of another extractive process that will not create PERMANENT or lasting jobs is one that surely hurts every New Mexican.

Please, do not move forward with this project. Surely the clean air and drinking water that your grandchildren need is far more crucial than another tech strawman project "bringing temporary jobs" that will continue to fail to bring growth.
