

Konrad Juengling

As the Air Quality Bureau, Project Jupiter falls directly under your purview as data centers significantly contribute to air pollution in the form of higher greenhouse gas emissions, and some centers build on-site gas turbines or use thousands of diesel backup generators. The project will pollute our breathing air, the water, and the land. We also don't have the water supply available to support this project. Please prioritize citizen's air quality, and thus their health, above profits for a large company that won't really contribute to NM's economy in any significant way.
