its like you guys arent even thinking about the effects this will have on our environment, and thats not even the only factor that will be influenced if this continues to be built. there are so much articles, documentaries, and comments from people who live NEAR data centers not even as big as this one. so what makes you think that this will benefit us in any way? we already are experiencing shortages on WATER, prices for basic commodities are getting higher and higher while people who are already struggling have an even harder time to balance the expenses. where do you plan on obtaining the water you need for this? Think about the people, the animals, our homes, there is no way in any world that AI needs a facility this big. at the rate AI is advancing, this is absolutely unnecessary. what even is this facility truly for?
