

Mattison Bock

Ai should not be taking over the world, especially when all it does is destroy. It causes air pollution, noise pollution, droughts, raises energy costs for poorer citizens, Causes plants to stop growing to the sound vibrations and even has evidence of effecting the fertility of local wildlife, and what is all of this destruction for?! A few job/ (barely even 50) and for people to make ai images of hot girls and steal data. As a citizen, I saw cancel project Jupiter for the future of humanity and for the sake of future generations still having a planet.
