

Bethany Ramirez

To accept a proposal such as Project Jupiter shows the negligence of citizens safety. If there is no attempt to assure that citizen health goes first, then this Bureau, as well as other departments of other organizations, will be considered complicit in taking part of supporting this action. The voices of the people living within those residences must be heard and therefore be used to take action against the implementation of data centers. It is up to you to decide the importance of human life and health or the support of a disastrous procedure meant to destroy the environment and living beings. This will determine the stance of NMED. What action will taken? If I can sway even a pinch of persuasion to this Bureau, deny the air quality permit application. If not denied, allow public hearings held at Santa Teresa and give the public an additional 60 days to evaluate the air quality permit so community members can participate equitably.
