

Corrinne Farner

I strongly oppose the Yucca Growth Infrastructure permit related to Project Jupiter.

Environmentally, the project will create more air pollution in an already smoggy area and will deplete already compromised water resources. The Southwest is no place for data centers in an ongoing drought. The project's dependence on Bloom Energy bodes poorly for outcomes as Bloom has been found to under deliver on promised production and has been held accountable for unacceptable levels of pollution in previous projects. In regards to the project public relations, it appears that there are issues around ethics that have been breached with consumers' opinions being misrepresented. I do not support giving business to organizations that seem so clearly to be working against the public interest.
