

Jesse Rivera

Please reject this proposed data center. I am deeply disappointed in the dishonesty and behavior of this organization through its clear and blatant deception to New Mexicans. There have been hundreds of not thousands of instances of misrepresentation of both public officials and community members including myself about this project. This alone should disqualify them from further business in New Mexico and their contract.

Data centers like this have been shown time and again to be harmful to the environment, ecosystem and communities around it. This is planned to be taking from and polluting critical water sources while we are in the midst of a drought, this will have generational health effects in the surrounding communities and this will critically disrupt the animals and fauna around it through its air, water, land and noise pollution. Keep this center out of New Mexico.
