

## Jolie Ybarra

New Mexico Environmental Department, I am asking you as a citizen of New Mexico to reject this project. Data centers need to be stopped!

New Mexico already has a dwindling water supply. Adding a data center that consumes ungodly amounts of water that humans could be using to feed their families and farms would be catastrophic to the people, and wildlife, of New Mexico.

We all deserve rights to clean drinking water. It is unconstitutional to allow billion dollar companies access that much water, when the people of New Mexico cannot even swim in the Rio Grande because of climate change. New Mexico is a beautiful, adverse environment, which provides life and sustainability to countless wildlife species.

If this project is successful, New Mexicans and wildlife all around the state will struggle for clean drinking water, clean air, and populations around the data center will have higher electricity bills.

We have already seen it in North Carolina, Texas, and in Mexico. There have been ponds and lakes drained because of data centers, pollutants put into the air that forces populations to breathe in harmful gasses.

This will create more problems than solutions. Our air quality will be destroyed, as well as our clean water supply, which will likely lead us into another major drought.

I ask you once again to reject Project Jupiter. New Mexicans against Data Centers!
