

Michael Taylor

The microgrid air quality construction permit for Yucca Growth Infrastructure should be denied. The project will emit more pollution than Las Cruces and Albuquerque combined. The purpose would be to support Project Jupiter, a data center project that no one in the area asked for. The project was shrouded in secrecy before approval by the Dona Ana County Commissioners, and now is the focus of a propaganda campaign to manufacture support for a data center that will not improve any aspect of life in Dona Ana County. The pollution created by the microgrid will leave New Mexicans and West Texans in poorer health and wealth, and will only benefit a minority of already wealthy tech investors and developers. If Yucca Growth Infrastructure and Project Jupiter were going to be a good thing for New Mexico none of the secrecy and propaganda would be necessary.
