

Laney Matanis

Water usage and lack thereof of this resource is at the forefront of my mind constantly as a water resource engineering student at NMSU in Las Cruces. The issue of water usage in southern New Mexico was already a huge problem before Project Jupiter became a thought, and with it can only bring worsening for our water sources. There is no positive to allowing such a project move forward in an arid climate like ours. The money isn't worth it when we run out of water and the area is no longer habitable. I only see huge issues arising with the construction of the data center, so please for the sake of everyone in southern New Mexico and surrounding areas: do not allow project Jupiter to come to fruition
