This project is a mission that will begin an ending to this place we call home. There's little to no of the Rio left and our summers are getting hotter and hotter. Bloom Energy has a history of dumping hazardous waste and there is no guarantee they won't do it again, instead of risking the health and lives of the people in this community, the air quality permit application must be denied. If we go through with this, it will bring forth climate disaster, government sponsored environmental racism. Please don't destroy this beautiful place we all home with this project. The people who've grown to call this place their home should have a say in what happens to it, community member participation is extremely important to us. Please listen to us and help us save our home.
