

Joe Gallegos

Hello, I am writing as a concerned citizen of New Mexico. Every single day I read a new story about how these data centers are degrading the life of the residents in which they directly impact. Project Jupiter will be no different. They say that they will create jobs and spur economic development. But at what cost? Our water? Our environment? We will be like these other cities and counties who are now faced with higher rates, having to monitor their water usage, and are having environmental and noise impacts. Why would we be the exception? Why would this company, oracle, be any different? The truth is, these data centers benefit their benefactors. They receive all of the benefits while all of the losses are socialized by the people of the places in which they exist. New Mexico will be worse off with this project. It's people will have to face more environmental concerns. The nation as a whole will have to face severe surveillance and constitutional problems as a result of these data centers since they do have government contracts in the surveillance world. The people of New Mexico do not want this, no matter how much they pretend they will help us. They will not. We have numerous examples of the pitfalls of these data centers and it would be criminal to ignore them. Thank you. Joe Gallegos (Albuquerque)
