

Shania Hernandez

We lived without AI for so long, why do we need it now? It's not fair to the planet that homes US and would be just fine without us, we need this planets water, we need its resources and by adding this data center we will lose those resources fast, if humans ever go extinct the earth would be just fine without us, why do you want to harm the earth that WE need, it's not fair to the people that actually appreciate clean water and good vegetation, we can live without AI or data centers, you guys just want to traffic other stuff and hide it behind data centers.
