

Ana H

I am extremely opposed to Project Jupiter. An AI data center is not needed in New Mexico. We barely have water to support our own people. Our aquaphors are drying up at an accelerated rate. Our surface water is disappearing at an accelerated rate. As a New Mexico resident, I am concerned that this project is just going to line Yucca Growth Infrastructure's pockets and not create jobs for New Mexicans. I know for a fact that this permit application is just a courtesy and required by NMED. YGI's air quality inspectors aren't actually going to follow the letter of the law. They don't care about people, the environment, or the future of planet Earth.
