

Collin King

I am a resident of Dona Ana county and I strongly oppose the development of any data center in the county. This is a resource scarce area. Data centers serve only disconnected billionaires and their AI fever dream; a solution without a problem. They have no legitimate purpose in economic development and provide no benefit to local infrastructure. In fact they are a risk to humanity and life on this planet.

Additional consumption of limited water and other resources for this billionaires play thing should not occur. No amount of pollution whatsoever is acceptable for such a project and it should be shut down.
