

## Kaylin Prosser

I firmly believe in the reality that many in New Mexico face when it comes to genuine scarcity of water not only for the demands of the populace, but also the animals and plant life that call this state home, the last thing we need is a billionaire telling us that AI is entitled to the little water we all have. I also believe the supposed economic growth will never outweigh the negative impact on our environment and resources. To approve of this project is short sighted at best, and an absolute betrayal to all those that call New Mexico home. No AI data centers in our state.
