

Water has always been a sacred and scarce resource here in New Mexico, one that is increasingly threatened every day by the effects of climate change, let alone the effects of a data center which we don't need. A data center that would use thousands if not millions of gallons of water a day. A data center like all other data centers that produces and emits tons of greenhouse gases into our atmosphere which work to worsen the climate crisis we are already in. We here in New Mexico do not need a data center, any data center especially the likes of which project Jupiter is proposing. As a community we should be looking for ways to combat the effects of climate change to make our environment better and more sustainable, not build data centers that do nothing for us as a community. A data center whose only purpose is to line the pockets of greedy billionaires and giant corporations that care nothing about our state or our community. For the sake of our future, for the sake of our climate, for the sake of our state, and for the sake of our community, say no to project Jupiter.
