

Melissa Gildark

I am strongly opposed to Project Jupiter. This plant is unnecessary and will pollute our beautiful natural environment. It will use 1 million gallons of our precious water per day. The people, plants and animals of New Mexico need that water to survive and grow crops. It will also disperse tens of millions of tons of cancer causing chemicals and greenhouse gasses into our air. This company has already been fined for improper disposal of hazardous materials. It is irresponsible, dangerous, and an insult to the people of New Mexico if Project Jupiter goes forward. Please stand with the people and reject the application of project Jupiter/ Yucca Growth Infrastructure.
