

Max Smith

I very strongly oppose the construction of the data center in Dona Ana County, which will have extremely negative environmental effects on the quality of air, water and soil. Such a data center will also drive up water and electricity costs for local communities and worsen their health and quality of life, all for no good reason, as there will be no real value gained from this data center. Project Jupiter is horrendous, and to approve it shows a disgusting lack of concern for the lives of real people and the environment, especially in the Santa Teresa community. Do not approve the Air Quality Permits.
