

Mary Maestas

Please deny the air quality permits for Yucca Growth Infrastructure, LLC. This project does nothing to benefit New Mexico and only endangers NM residents and the environment in the long run. Additionally, the state should be considered cumulative impacts for developments and industries, rather than piecemeal consideration of emissions and impact. Water resources should be carefully conserved instead of used for data centers. We do not have the water for this development. Instead we should focus our efforts on reducing our consumption of the products that are powered by data centers.
