I don't live in NM, or anywhere near that state. But to have to sit back and watch as this data center takes up valuable space, money, water, and breathable air is like watching hell. We do not need these data centers to live, and have not needed them. I just pray that enough people sign this document and that this project is stopped. We are stripping our earth of its valuable resources, its sickening to watch people not care about things like these, not realizing one day they won't have water to drink, or bathe with. One day we won't have clean air, from these data centers and other air polluting systems. I refuse to sit back and watch this data center be built. Stop project Jupiter and save the Rio Grande. The public should be given an additional 60 days to review and comment. The air quality permit should be denied. If the permit is not denied, then there should be a hearing held on Santa Teresa. Approving of the permit would be government-sponsored rascism.
