

Haven Boyd

Unfortunately I'm not as knowledgeable as I would like to pretend I am on the effects of AI data centers. However, I know enough. The pollution to the air and water in the surrounding area would be disastrous for the residents the data center would be built near. I'm worried for the families just trying to take care of each other with a data center near by. There's no doubt that the polluted air is terrible to breathe in. Especially for the small lungs that reside in children and babies. I care about their health and future. There's no scale for how bad this data center will be since there's no data center this size. I really do hope we keep it this way. I also ask for a public hearing involving the communities surrounding the data center. NMED should give the public 60 days of additional time to review and comment on the application to ensure everyone can meaningfully comment and participate. Their voices need to be heard since they'll be the ones dealing with the repercussions.
